Capability Statement

Company Overview

Embedded Alliance, Inc. is a veteran, woman, minority, LGBT owned; analytical and geographic information system (GIS) solutions firm. Our team provides innovative GIS solutions to the Intelligence Community with demonstrated success in short term crisis and long term analytic support. Our cutting edge work has been recognized by industry awards including a 2013 ICY Award and 1st place in the 2016 Esri/USGIF Classified Web App Challenge.

By fusing our GIS knowledge with current and future organizational assets, efforts, trends, and competencies we ensure a sustainable and cost effective solution. Our team is dedicated to providing custom, scalable GIS solutions to make informed decisions regarding their intelligence needs. Whether you are an agency, a small or large business; we provide effective geospatial solutions for managing, analyzing, and displaying your data within its spatial context by aligning software and systems with your organization's needs.

Core Competencies

Enterprise GIS Solutions:

Our engineers are highly experienced in database and systems architecture, design, development, maintenance, and integration. We have development experience with cloud computing, software development and web applications. Given our award winning proficiencies in GIS and application development we are able to expose your enterprise data in intuitive, interactive visualization interfaces, bringing in-sight and value to your organization's data.

Geospatial Data Creation, Management, and Dissemination:

Our data driven team works with your organization to ensure your assets are being utilized to their full geospatial capacity. We have experience in data graphing and charts, custom components, choropleth and grid visualizations, geocoding solutions, real time events, change detection, alerting, data flow and deployment automation, and more. Our team has a proven ability to provide the full lifecycle development, required to ensure your data is available at every level, from a war fighter to a policy maker.

Geospatial Analysis:

Our data scientists and analysts are skilled in solving complex problems using spatial information through a variety of methods including density, network, statistical and spatio-temporal analysis; by enabling our client's analytical capabilities through custom geoprocessing services and web application solutions.

NAICS Codes:
